

Document Title

By John Doe

1. Introduction

This is the first paragraph of the document. It contains regular text that should be extracted accurately. Every word matters for AI consumption, so the converter must preserve content exactly as written.

This is the second paragraph, separated from the first by a gap. Paragraph detection should identify these as two distinct blocks. Numbers like 3.14159 and special chars like & < > should be preserved.

1.1 Background

Background information goes here. This section tests sub-heading detection based on font size differences relative to the body text.

2. Methods

The methods section describes the technical approach used. Content accuracy is paramount for AI/LLM consumption use cases.
