

Text Formatting Showcase

Format Tester

April 13, 2026

1 Basic Formatting

This paragraph contains **bold text**, *italic text*, and underlined text. We can also combine them: ***underlined text*** is used for strong emphasis.

2 Monospace and Code

Inline code like `print("hello world")` should be wrapped in backticks. Variable names like `max_value` and `user_input` should preserve underscores correctly.

3 Font Sizes

This is tiny text. This is small text. This is normal text. This is large text. This is Large text. This is LARGE text.

4 Text Styles

Here is SMALL CAPS TEXT and here is sans-serif text. We also have *slanted text* which is similar to italic.

5 Mixed Formatting Paragraph

In this paragraph, we mix **bold words** with *italic phrases* and some `code snippets` all in the same sentence. This tests whether the converter can correctly identify formatting spans within a single line of text and apply the appropriate Markdown markers without overlapping or nesting errors.
