

Multi-Level Heading Structure

Structure Tester

April 13, 2026

1 Level 1: Architecture

This section tests heading level detection across multiple depths.

1.1 Level 2: Frontend

The frontend uses vanilla HTML, CSS, and JavaScript.

1.1.1 Level 3: HTML Structure

The HTML file contains the drag-and-drop upload zone, progress display, result view, and error handling sections.

1.1.2 Level 3: CSS Design System

CSS variables define the color palette, typography, spacing, and animations. The design uses a dark theme with glassmorphism effects.

1.2 Level 2: Backend

The backend is built with FastAPI and Python.

1.2.1 Level 3: API Routes

Five routes handle the conversion lifecycle: upload, status, download Markdown, download ZIP, and content preview.

1.2.2 Level 3: Pipeline

The conversion pipeline consists of six modular layers.

2 Level 1: Testing

Comprehensive tests verify each layer independently and the full pipeline end-to-end.

2.1 Level 2: Unit Tests

Each pipeline module has dedicated unit tests with synthetic PDF fixtures.

2.2 Level 2: Integration Tests

End-to-end tests verify that real PDFs convert correctly with all content preserved.

3 Level 1: Deployment

Deployment instructions for both development and production environments.
