

# Mixed Formatting Stress Test

QA Team

April 13, 2026

## 1 Paragraph with Everything

This paragraph has **bold text**, *italic text*, `inline code`, a reference to Section 2, and some numbers like 3.14159 and 2.71828. It also includes special characters: ampersand (&), percent (5%), dollar sign (\$100), and various punctuation marks: semicolons; colons: dashes — and ellipses...

## 2 Lists Followed by Paragraphs

Here is a list:

- **Bold list item** with explanation text
- *Italic list item* with different formatting
- `Code list item` showing a command

And now we continue with a regular paragraph that follows the list. The converter should correctly separate the list from this paragraph.

## 3 Table Followed by Text

| Metric    | Value |
|-----------|-------|
| Precision | 94.2% |
| Recall    | 91.7% |
| F1 Score  | 92.9% |

The table above shows our evaluation metrics. As you can see, the system achieves high precision and recall across all test cases.

## 4 Multiple Paragraphs

First paragraph of this section. It contains multiple sentences that should be joined into a single paragraph in the Markdown output.

Second paragraph of this section. This tests that paragraph breaks are correctly detected based on vertical spacing between text blocks.

Third paragraph. Short but distinct from the previous paragraphs.
